Standard Operating Procedure

SOP – AZ 111 Cycle Count Procedure

Author:	**Ruben Urias**	(SIGNATURE)	Date:
Revised By:	**Ruben Urias**	(SIGNATURE)	Date: 5/7/2024

Review & Approval

Functional Manager	**Corbin Christian**	(SIGNATURE)	Date:

1.0 **Scope:** To conduct a physical count of product with frequency based on planning group classification in InfoPlus.

2.0 **Purpose:** To ensure all Inventory Control team members are trained on the proper Cycle Count procedure for Clients

3.0 **Responsibility:** It is the responsibility of Inventory Control team members to follow the Clients Cycle Count Procedure. It is also the responsibility of all Supervisors and Managers to ensure all team members are trained on the proper procedure to complete Cycle Counts for Clients.

4.0 **References:**

4.1. None

5.0 **Definitions and Abbreviations:**

5.1. ICS – Inventory Control Specialist

6.0 **Process:**

6.1. Clients Cycle Count Program

6.1.1. The Inventory Control Specialist (ICS) will first review the cycle count schedule to determine what part number(s) to count.

6.1.2. The ICS will generate the part number(s) in InfoPlus, (Reports>Inventory Reports>Inventory By Location with Serial) and print a copy of the screen showing the part number, locations, and on hand quantity.

6.1.2.1. Note: Each part number being counted must have a separate printed sheets for Reserve, line one, and line two locations.

6.1.3. When ready, the ICS will begin by going to the reserve locations where the product is located and count each pallet.

6.1.3.1. If any partial cases exist, the individual product must be hand counted inside each partial case.

6.1.4. As the item is counted, the quantity is documented for each location on the InfoPlus print out.

6.1.5. When all reserve locations of the product have been counted and documented, the ICS will research any variances and make the proper transactions in InfoPlus to correct it.

6.1.6. Once shipped clean the ICS will generate the same report (Reports>Inventory Reports>Inventory By Location with Serial) and proceed to count Line 1 and Line 2.

6.1.7. Once Line 1 and Line 2 has been counted the ICS will determine the overall variance for the selected item by reviewing the previous counts.

6.1.8. If a large variance has been found then the item must be recounted to ensure the correct count.

6.1.9. Once the variance has been determined the ICS will then log this on the monthly spreadsheet.

6.1.10. The Inventory Supervisor will then review all variances daily.

6.1.11. The Inventory Supervisor will then create a Physical Count in InfoPlus for all completed items for that day (Warehouse Management>Create Physical Count). The supervisor will then complete that count using the mobile app reflecting all variances.

6.1.12. After completing this count the Inventory supervisor will then complete any adjustments that need to made to correct inventory.

6.1.13. This process will then be repeated for all items until the monthly Clients requirements have been met.

7.0 Document History:

Revision	Change	Effective date
ORG	Original Issue	10/10/20
Rev A	**Update company change of name and Logo,** all references of Axle to HubStarr. Process Reviewed.	5/7/2024

This process is required to be reviewed, at a minimum, on a 3 year cycle. If there are no changes to the previous revision the signature below is evidence of the review and approval of this procedure.
